**DO YOUR MATTE COATINGS
LOOK LIKE THIS?**

The majority of
matte coatings
settle on press
and in the container.

**UVitec has designed
a new matte coating
that has very low gloss
and will not settle.**

Why should you settle for less?

Contact UVitec to find out more about
our new matte coating (22602-87)
and our complete line of
other versatile coatings.

CREATING A CLIMATE OF TRUST IN A WORLD OF UNCERTAINTY

Visit us at **PACK EXPO Booth C-3767**

SICPA OASIS®
(Optically Active Security Ink System)

SICPA OASIS® is a dual-feature security ink that incorporates both an overt color shift and a semi-covert level of security for multi-layered package or label protection. This specialized ink is based and developed on liquid crystal technology that uses light interference to display its color shifts. Semi-covert properties become visible with light polarization filters. Several color shifts and polarization effects are available.

As the only producer of SICPA OASIS® in the world, SICPA is able to supply only to certified printers under a strict distribution policy, further protecting the product integrity. SICPA, as the leading global provider of security inks and solutions, provides numerous anti-counterfeiting, anti-alteration and authentication technologies. Incorporating SICPA OASIS® and other specialized inks into your packaging applications ensures multi-layered product security.

We remain committed to you for all your security needs and look forward to seeing you at PACK EXPO.
